

ID Director for IBM Tivoli Access Manager Enterprise Single Sign-On

BIOMETRIC USER IDENTITY: CONVENIENT, STRONG USER AUTHENTICATION

Providing fast and easy access to applications and databases is imperative to every business.

The challenge is to provide an authentication method that is equally secure and convenient. In 2009 Gartner reported 25% of ESSO implementations augmented passwords with alternative authentication.

TAM ESSO 8.1 (and later versions) are equipped with fingerprint biometric user authentication. Unlike passwords, tokens and smart cards, which can be easily lost, forgotten or stolen, ID Director for TAM ESSO secures applications with fingerprint biometrics, delivering strong authentication and superior user convenience.

ID Director for TAM ESSO eliminates the need for users to reset and record passwords, IDs and PINs which can be easily compromised. The only identifier a user needs is a fingerprint.

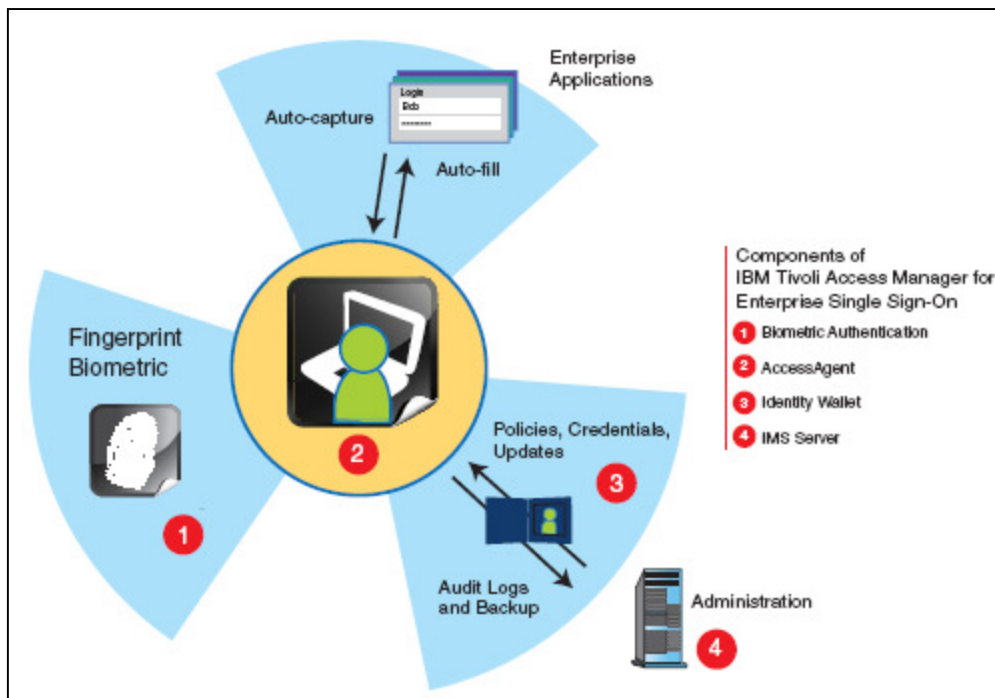

Highlights

- Eliminate password-related helpdesk costs, replacing passwords with fingerprint biometrics to establish user identity
- Strengthen security and meet regulations through this strong authentication alternative, supported out of the box in TAM ESSO
- Improve productivity and simplify the end-user experience, with the touch of a finger, users sign-in, eliminating the need for passwords
- This strong form of authentication is easy to implement and equally easy to manage/administer

FEATURES

Easy to use: With its straight forward, intuitive user interface, ID Director for TAM ESSO supports readers from every major fingerprint reader manufacturer interchangeably, giving organizations ultimate flexibility.

Superior Security & Convenience: Providing security and convenience when establishing user identity is crucial. ID Director for TAM ESSO replaces less secure, often forgotten passwords with fast, convenient, accurate fingerprint biometrics. Users establish identity with a simple touch of a finger!

IBM Tivoli Access Manager with biometric user ID for Enterprise Single Sign-On combines single sign-on, strong authentication, session management, automated navigation to any screen in the application, and audit tracking with no change to the existing infrastructure.

The ID Director enrollment and identification processes are simple and straightforward

Up to 80% of help desk calls are for password resets. For large organizations, this cost can run into millions of dollars annually!

ID Director for TAM ESSO:

- Strengthens security
- Eliminates passwords
- Improves productivity
- Addresses compliance requirements
- Significantly reduces costs and streamlines operations

Activation of ID Director for TAM ESSO and integration services are available through the IBM Global Services Group, IBM Tivoli resellers, or directly from BIO-key.

Superior Speed and Accuracy: Based on BIO-key's award winning fingerprint biometric algorithm, one of the most accurate biometric platforms available, ID Director for TAM ESSO leverages this discriminating biometric to deliver a superior security alternative to passwords and tokens, while offering users a more convenient way to establish identity.

Scalable: ID Director for TAM ESSO is built on the power and performance of the IBM TAM framework, the most scalable Identity Management and Access Control solution available today. It's fully capable of meeting your needs, growing with your application servers and databases to support your requirements from day one and as your systems mature and evolve.

Cost Effective to Deploy and Operate: Offering unparalleled flexibility, ID Director for TAM ESSO supports every major fingerprint reader manufacturer, no matter if it is an external device attached via USB port, or a reader embedded in a laptop or tablet. They can be used interchangeably; your users enroll once and can subsequently identify themselves using any supported reader.

With features like positive user identification, superior convenience, and reader interoperability, BIO-key's ID Director for TAM ESSO can be easily integrated to protect your applications and databases with fast, robust strong authentication.

ID Director for TAM ESSO provides:

- Positive user identification
- No need to cache passwords or user IDs
- Simple deployment and straightforward user operation

With ID Director for TAM ESSO, you can:

- Eliminate forgotten passwords and password resets
- Reduce help desk, compliance and administration costs
- Eliminate passwords, and improve the usability of your applications
- Provide fast, accurate transaction level capability

Access to the variety of applications and systems in your environment is at your fingertips with BIO-key's ID Director for IBM TAM ESSO!
