

ID Director™ for Oracle Access Manager

A STRONG AUTHENTICATION SOLUTION FOR APPLICATIONS PROTECTED BY ORACLE ACCESS MANAGER

PRODUCT OVERVIEW

In today's technology world, it is important to know who your users are, not just who they say they are. Unlike passwords or hardware tokens, your biometric identity trait can't be "borrowed", lost or stolen. BIO-key's ID Director for Oracle Access Manager (OAM) is a fingerprint biometric solution that exceeds the demanding security needs of users, MIS professionals and security personnel. It scales to accommodate populations of any size without compromising system speed or accuracy.

This strong form of authentication can be easily added to satisfy industry regulations including HIPAA and FSTC, or to establish user identities as part of your corporate audit trail. BIO-key's ID Director for OAM is a solution that is easy to implement and equally easy to manage/administer.

FEATURES

The foundation of ID Director's security framework is BIO-key's WEB-key® software, a three tiered security architecture that protects information with triple level encryption. It can be deployed to closely reflect your application's business logic, including transaction level authentication. WEB-key enables developers and integrators to quickly build scalable biometric identification systems, regardless of prior biometric experience. BIO-key's patented biometric algorithm delivers fast and accurate identification of users. What's more, WEB-key stores this data as a compact mathematical model, enabling rapid comparison against databases of any size.

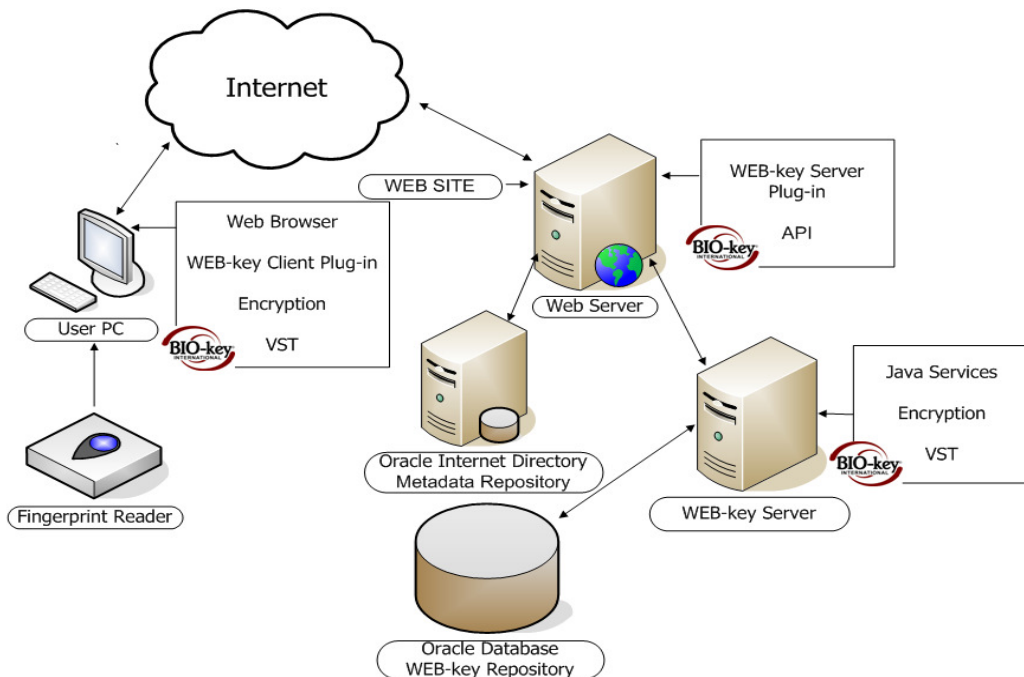

Using ID Director for OAM, a user's biometric enrollment can be linked to any number of applications protected by Oracle Access Manager.

Providing fast and easy access for employees, customers, or business partners to databases and applications via the Web, is imperative to every business.

However, without secure user identification, more people accessing more applications over the Internet means more chances for security breaches, and compromised information.

Today Oracle Access Manger relies on passwords, tokens or smart cards, These alternatives do not provide secure enterprise authentication. ID Director for OAM protects your applications with strong authentication and superior user convenience.

ID Director eliminates the need for users to reset and record passwords, IDs and PINs which can be easily compromised. The only code a user needs is a fingertip.

The ID Director browser plug-in provides visual and textual cues to ensure the best possible results.

ID Director for OAM is the perfect identification security solution for:

- Financial applications
- CRM applications
- Accounts receivable /payable applications
- Corporate intranets
- Enterprise data
- Any application protected by Oracle Access Manager!

Easy To Use

ID Director for OAM is surprisingly easy to use. It supports every major fingerprint reader manufacturer and all of the popular internet browsers. It has a intuitive, straight forward user interface that is adaptable and customizable to suit your specific application.

Superior Security & Convenience

Today more than ever, balancing security and convenience when establishing the identity of users is crucial. ID Director for OAM does not compromise one for the other, it *delivers both superior security and user convenience!*

With **WEB-key**, one of the most advanced biometric security framework available today, you utilize embedded PKI architectures and BIO-key's discriminating biometric algorithm to deliver the strength and security necessary to protect access to your organization's assets.

Scalable

ID Director for OAM is built on the power and performance of the Oracle Access Manager Middleware framework, the most scalable Identity Management and Access Control solution available today. It's fully capable of growing within your application servers and databases to support your requirements from day one and your systems mature and evolve.

Solution Oriented

ID Director for OAM offers the ultimate in flexibility to easily integrate into any solution. It supports every major fingerprint reader manufacturer no matter if it is an external device attached via USB port or embedded in

your laptop or tablet. These readers can be used interchangeably; your users enroll once and can subsequently identify themselves using any supported reader.

With features like positive user identification, secure communications, superior convenience, and reader interoperability, BIO-key's ID Director for OAM can be easily integrated to protect your applications and databases with a robust Strong Authentication Solution.

Access to the variety of applications and systems in your environment is at your fingertips with BIO-key's ID Director for OAM!

ID Director for OAM provides:

- Positive user identification(1 to n, not just one to one verification)
- No need to cache passwords or user IDs
- Simple Web integration and straightforward user operation

With ID Director for OAM, you can:

- Reduce costs associated with passwords resets
- Eliminate passwords, and improve the usability of your applications
- Provide fast transaction level capability
