

ID Director™ for Oracle Fusion Middleware

STRONG AUTHENTICATION SOLUTION FOR ORACLE FUSION MIDDLEWARE APPLICATIONS

PRODUCT OVERVIEW

BIO-key's ID Director is an easy to implement and manage solution that meets the demanding needs of users, MIS professionals and security personnel. It is a scalable, solution orientated and tightly integrated Authentication Scheme.

True User Identification® means that you know who users are—not just who they say they are. It exists only when authorization is based entirely on an identity trait that can't be "borrowed", transferred, lost or stolen.

Authentication using ID Director for Oracle Fusion Middleware delivers True User Identification!

FEATURES

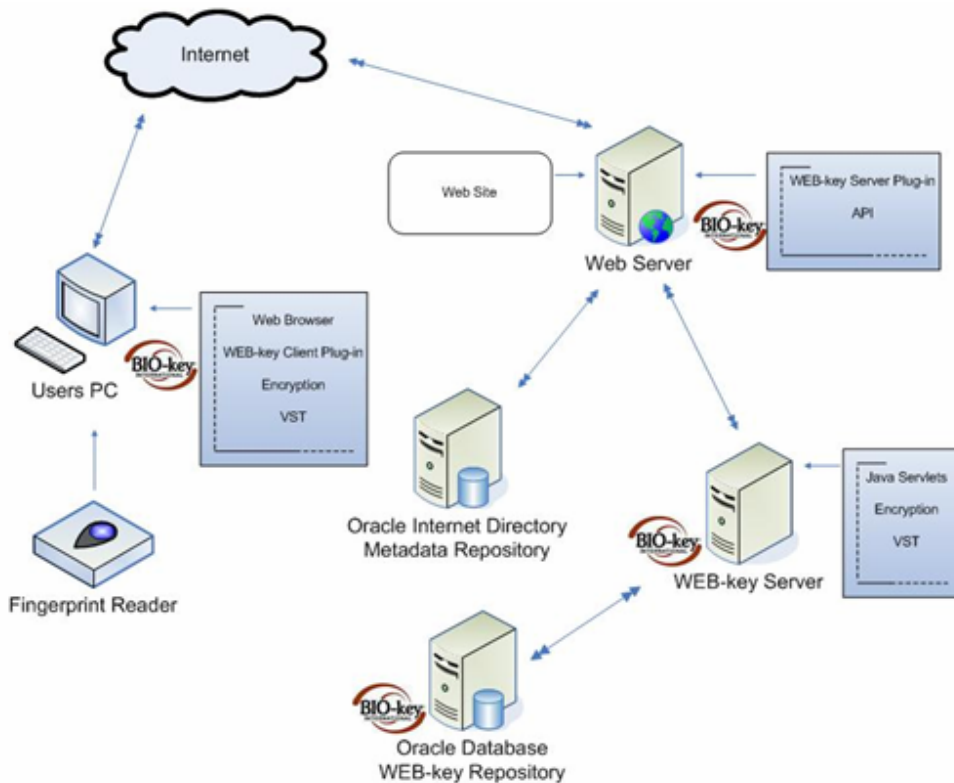

The foundation of ID Director's superior accuracy is BIO-key's patented biometric algorithm, **Vector Segment Technology™ (VST™)**. VST captures more data than any other biometric in the industry to ensure fast and accurate identification of users. What's more, ID Director stores this data as a compact mathematical model, enabling rapid comparison against databases of any size.

The user registration can be linked with any number of applications within an Oracle Application Server, and/or other application servers.

Giving your employees, customers, and business partners access to your applications via the Web benefits your business by allowing them to place their own orders, service their own accounts, and update their own profiles.

This access, however, brings security risks. More people using more applications over the Internet means more chances for security breaches, stolen data, and halted operations.

Oracle Strong Authentication solutions help solve this problem by creating user profiles and checking multiple factors, such as passwords, tokens, smart cards, and biometrics to identify users before give them access to your IT infrastructure.

The WEB-key browser plug-in prompts the use to submit a finger and provides visual and textual cues to ensure the best possible results.

Finally, a biometric security solution for:

- Financial applications
- CRM applications
- Accounts receivable /payable applications
- Corporate intranets
- Enterprise data
- Any web based application!

Easy To Use

Though significantly advanced, ID Director is surprisingly easy to use. That's because all of the science is on the inside. The user interface is intuitive, familiar and straightforward.

Security

Today more than ever, security is a major concern, even when implementing a convenience solution like a single sign on product. Every application must ensure that it can truly confirm who the user is?

This is where ID Director stands out. The solution utilizes **WEB-key™**, the most advanced biometric security framework available today, for a trusted and accurate user authentication. Utilizing embedded PKI architectures, and BIO-key's discriminating biometric algorithm, this solution delivers the strength and security necessary to protect corporate and country assets.

Scalable

ID Director is built on the power and performance of the Oracle Fusion Middleware framework, the most scalable Identity Management and Access Control solution available today. It's fully capable of growing within your application servers and databases to support any need.

Solution Oriented

ID Director offers the ultimate in flexibility to easily integrate into any solution. It supports every major fingerprint reader manufacturer. And readers can be used interchangeably; a user can enroll on any supported reader and then identify himself using any other supported reader.

With features like positive user identification, secure communications, ease of use, and reader interoperability, BIO-key's ID Director for Oracle Fusion Middleware provides a robust Strong Authentication Solution.

Access to the many varied applications and systems in your environment is at your fingertips with BIO-key's ID Director for Oracle Fusion Middleware!

Ask yourself, does any other Authentication Solution offer these features?

- Positive user identification, not just verification.
- No caching of current passwords or user IDs.
- Protection against hacking.
- Simple Web integration and straightforward user operation.

Imagine offering ID Director for Oracle Fusion Middleware as part of your solution for your clients or for your organization. What do you see? A business with confident satisfied users? Disappearing password maintenance problems and the attendant cost-savings? Getting the right information to the right people—and no one else!

Whatever you imagine, it's right at your fingertip with ID Director for Oracle Fusion Middleware.
