

BIO-secure: THE BIOMETRIC SECURITY SOLUTION FOR WINDOWS WORKSTATIONS AND DOMAINS

THE SIMPLE, SCALABLE BIOMETRIC SECURITY PLATFORM FOR WORKSTATION AND ENTERPRISE IMPLEMENTATIONS

IMPROVE YOUR SYSTEM SECURITY WHILE ELLIMINATING THE NEED TO REMEMBER AND MANAGE PASSWORDS

BIOMETRIC LOG-ON FEATURES

- Compatible with over 20 different biometric fingerprint readers
- Available in workstation or enterprise editions
- Includes a utility for users to practice their biometric enrollment and verification prior to activating their biometric security
- Configured for multiple user capability on a single workstation
- Screensaver feature replaces passwords with a simple touch of the finger
- Fast Logon option replaces the network login window with a fast, convenient biometric logon- simply touch the biometric sensor and go!

Imagine logging into your computer and all of the online services you use without having to remember, manage or reset the passwords they require. BIO-key's BIO-secure eliminates the inconvenience of text based passwords, replacing them with finger based biometric identification. This more secure, more reliable form of identification is an intuitive, uncomplicated, and easy to install alternative to text based passwords that are easily forgotten or compromised.

Immediate benefits include:

- A significant increase in network security
- Increased convenience- no more passwords to remember!
- Eliminates help desk costs associated with password support
- Rapid Roll-out and minimal end user training, thanks to the user friendly Practice Utility and Self Enroll Feature.

You will also see a long term return on your investment with the open systems standards based architecture that adapts to your organizations ever evolving business.

BIO-key's BIO-secure Enterprise Edition works with Microsoft Active Directory to provide enterprise-grade features for strong authentication. BIO-secure installs on any computer running Windows® 2000 Professional, enabling biometric access to local machines and LAN-based networks requiring no network integration.

Our partnership with leading biometric hardware suppliers maximizes product flexibility, offering you a wide range of reader options to meet your specific application needs. Options available include readers integrated into the keyboard of most PC manufacturers including Dell, Gateway, and MPC. A wide variety of PCMCIA and USB readers are available also!

Looking for a secure, true single sign on alternative?

Need to integrate your biometric security solutions with a number of client-server applications? BIO-key can help; our partnerships with leading single sign on (SSO) providers extend the simplicity of biometrics to the application level.

BIO-secure

SYSTEM REQUIREMENTS

Workstation Edition:

Client:

- Pentium III 600 MHz
- 64 MB RAM
- 64 MB Hard Disk Space
- Windows® 2000/XP Professional
- High Encryption Pack

Enterprise Edition:

Client:

- Pentium III 600 MHz
- 256 MB RAM
- 100 MB Hard Disk Space
- Windows® 2000, 2003 Server, Advanced Server or DataCenter Server
- Windows Active Directory 2000 High Encryption Pack

Password-based authentication is problematic at best and at worst, a liability for administrators. Enterprise administrators face very real IT costs handling password resets and significant resistance when trying to roll out and enforce strong password rules, such as changing passwords frequently, or special length and character requirements. Administrators are acutely aware of the risks faced by their organizations when employees ignore or circumvent security policies.

BIO-key's strong authentication alternative solves these enterprise problems. Passwords can be consolidated and/or eliminated with something that cannot be lost, shared or stolen. Convenience and additional security can be added with the use of existing badges or card already your organization may already be using for corporate parking or building access.

Not all biometric solutions are equal. With years of experience working with government, financial institutions, healthcare and other Fortune 100 organizations, BIO-key recognizes the balance between convenience and security. Our patented algorithms that process and match the fingerprints capture thousands of data points from a single finger image, allowing us to rapidly and accurately identify or authenticate a person in databases with millions of fingerprints!

With this solid foundation, we can offer scalable enterprise-strength solutions, which allow organizations to leverage their existing network infrastructure investments.

BIO-key HAS THE ANSWER

The answer to increased security while improving user convenience! *Eliminate passwords*, which can be lost or compromised. *Eliminate the headaches* that arise when passwords need to be reset. *Eliminate the help desk and administration costs* associated with passwords! *Improve user convenience*- with the simple touch of the finger, users can quickly and easily log into your existing workstations and enterprise.

Rather than trying to pick a winner in the hardware race, BIO-key allows you to select whatever supported devices your applications require. We do this by incorporating a standard programming API and a consistent user interface, making the reader transparent to you and your users. A user can easily enroll on one device, then return to identify using a completely different device (as would be the case if one was using any of a wide variety of USB Fingerprint readers on an office desktop, then using a different sensor on your laptop when on the road.

CONCLUSION

Fingerprint biometrics is the most secure, cost-effective and convenient way to identify and authenticate users. Using BIO-secure, your infrastructure will be ready to accept virtually any scanner device your users require. Your investment to get started is minimal; we can install and demonstrate our technology in a matter of minutes!
